

Open Hole Anchor

KX Oil Tools Open Hole Anchor is a hydraulically actuated tool that is typically utilized to anchor a liner to the bore hole in an open-hole installation. To activate, differential pressure from annulus to tubing is required to initiate the set. Subsequent additional pressure will allow the piston to travel axially, and complete the set of the slips into the open-hole, anchoring the liner axially to the bore of the open-hole.

STANDARD OFFERING

- P110 Type Flow Wet
 - 350°F
- LTC Box x Pin

OPTIONS

- Flow Wet Materials
 - Connections
- Connection Configurations
- Other sizes available upon request

APPLICATIONS - Production, Injection & Stimulation
