

## RETRIEVABLE CASING PATCH

### STANDARD OFFERING

- 4.500" x 2.375"
- 5.500" x 2.875"

### OPTIONS

- Elastomers
- Coatings
- Variable Connections
- Other sizes available upon request

The KX Oil Tools Retrievable Casing Patch is a versatile downhole tool that can be run to isolate sections of the well to temporarily suspend production, isolate upper perforations during injection, or to increase annular pressure across a packer during stimulation of a lower zone. The KX Retrievable Casing Patch can be run by itself, in conjunction with additional KX Retrievable Casing Patches, or with other downhole tools such as a double grip packer.

While isolating the interval that is straddled the KX Retrievable Casing Patch has a micro annulus that allows for production from lower zones or for pressure to be applied through the tool.

### APPLICATIONS

- Temporary Suspension of Zones
- Isolation of Perforations on Injection Wells
- Protection of Upper Perforations During Fracing

### FEATURES, BENEFITS, AND ADVANTAGES

- Simple Design
- Fully Retrievable
- Fits on Standard Tubing
- Can be Run on Lined Injection Tubing
- Variable Spacing Available
