## **Hydraulic Set Liner Top Packer**

KX Oil Tools Hydraulic Set Liner Top Packer is a versatile packer capable of hanging high loads off the mandrel. The packer has a large bore and a reliable dual slip system for secure anchoring in the casing. The KX Oil Tools Hydraulic Set Liner Top Packer has a built in hydraulic piston that initiates the set of the tool once a pre-determined amount of differential pressure is applied in favor of the ID of the string. No rotation is required to set the packer and it can be run in deviated or horizontal wellbores.

The KX Oil Tools Hydraulic Set Line Top Packer can be landed in compression, tension, or in neutral as element pack off is retained through a body lock ring during setting of the tool. This tool can also be run in cemented and non-cemented liner applications.

### **APPLICATIONS**

- Multistage Stimulation
- Liner Top Isolation
- Injection and Production

### **FEATURES, BENEFITS, AND ADVANTAGES**

- Simple and Proven Design
- High Pressure Rating
- Adjustable Initiation Pressure
