Bridge Plug Setting Tool

The KX Oil Tools Bridge Plug Setting Tool is a single piston hydraulically activated setting tool. This tool is used to set the wireline version of permanent bridge plugs that now can be run on jointed pipe. The KX Bridge Plug Setting Tool comes with a blanked mandrel, eliminating the need for a secondary plugging device, and drains on right hand release from the permanent bridge plug.

The plug is run to depth and the tubing is filled with fluid. Differential pressure in favor of the tubing is applied which shears the setting tool out and breaks the top slip of the permanent bridge plug. Tension is applied to the upper slip and the plug can now be packed off as per the manufacturer's recommendations. Once the plug is packed off right hand rotation of the tubing string releases the running tool from the plug and allows the tubing to drain.

APPLICATIONS

- Setting Permanent Bridge Plugs
- One Step Permanent Bridge Plugs

FEATURES, BENEFITS, AND ADVANTAGES

- Adjustable Initiation Shear Pins
- Tool Drains Once the Plug is Set
- Easy to Redress
- One Setting Tool for 4.500", 5.500", and 7.000" Plugs
