

## Thermal Liner Hanger Packer

KX Oil Tools Thermal Liner Hanger Packer, is a top set liner hanger with lower hanging slips as well as top hold downs. It is commonly utilized as a liner top packer, but can be configured as a tieback packer, casing patch, or bridge plug, should the well design require it. The compact design, eliminates the need for a secondary hanger to be installed below, and incorporates an internal clutch that enables rotation during deployment.

### CURRENT SIZES
