## Running Tool

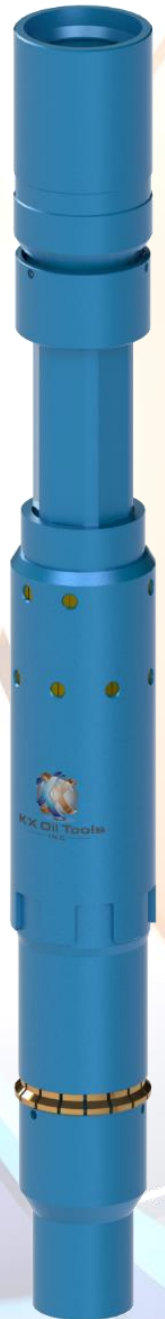

KX Oil Tools Running Tool is a robust, rotating, hydraulic release running tool, which comes standard with a secondary left hand emergency release. The tool is designed to operate in vertical, deviated and horizontal well applications, when rotating, and tension or compression is required to get the installation to depth.

### APPLICATIONS

- Completions
- Liners
- Cemented Systems

### FEATURES, BENEFITS & ADVANTAGES

- Primary hydraulic release
- Secondary left hand release
- Handles high torque loads matching most drill pipe threads
- Torque clutch engaged during deployment
- No external moving components during primary release
- KX shear pins eliminate inconsistencies in shear values, due to improper and inconsistent user installation
- Unique top sub connection eliminates the need for break machine to disassemble the running tool for redress
