

STANDARD OFFERING

- API Casing Materials
- Aluminum Insert

OPTIONS

Separation Sub

KX Oil Tools Separation Sub is a connecting product that is attached to the tubing string or slick joint, and holds the Liner Wiper Plug in place, so landing of the Drill Pipe Wiper Plug in the top of the LWP can be achieved. The lower groove accepts the shear screws anchored in the top end of the LWP, allowing a predetermined pressure indication on surface, and release of the DPWP and LWP to the lower landing collar once the screws have been sheared.

APPLICATIONS

- Cementing

FEATURES, BENEFITS, AND ADVANTAGES

- Uses KX shear screws to ensure consistent shear values when deploying KX Drill Pipe Wiper Plug
- Compatible with multiple liner hanger systems
