The KX Economax series of Liner Top Packers are designed to provide a low cost, reliable option when liner top isolation is needed the wellbore. The Economax Liner Top Packer comes standard with NBR Elastomers and a Re-Entry Sleeve to aid with entry into the liner string. This non-rotating liner top packer is deployed using the KX HPS Hydraulic Power Section and MSN Mechanical Setting Nut running tool.

Once on depth a ball is dropped and landed on seat, pressure is applied to generate force in excess the shear pins value installed to start the set, and then additional pressure applied to fully set the elastomers. Once set the liner top can be pressure tested. Rotation of 12 turns to the right will release the MSN from the Economax Liner Top Packer.

APPLICATIONS

- Production
- Uncemented Liner Applications
